

Powerful and Reliable

Stealth Security Technology

Stealth Security Technology (SST) is a high technology integrated business specialising in Fibre Optics for Security, Pipe Leak and incoming Threat Detection. The **Mantis-T** series of Fibre Optic Sensors Interrogators uses Distributed Acoustic Sensing (DAS) to detect events at extreme distances with astounding clarity and accuracy.

SST looks to protect your assets and prevent unauthorised access to any high value facility using covertly installed, responsive and intelligent sensing. The **Mantis-T1** detects walking, crawling, vehicles and malicious activities at fence lines, borders or any segment of a perimeter to a range of 3km (1.8 miles).

Mantis-T4

Effective Covert
Border Threat
Detection

For long range reliable Border Protection The **Mantis-T4** takes the advanced Technology of the **Mantis-T1** and supercharges it to a range of 60km (37.3 miles) without sacrificing accuracy, quality or reliability.

AI Controlled with Precision

The Mantis-T series is a covert, buried or field mounted intrusion threat detection system. Protect assets and critical zones with SST's instant response algorithms with a detection accuracy to 5m (16.5ft) event detection.

Applications

- Border Security
- Military Facilities
- Airports & Seaports
- Power Generation Facilities
- Prison / Correctional
- Base Protection
- Government Agencies
- High value assets
- Petrochemical Facilities
- Data Hubs
